General

If i've specified a link myself, feel free to trust and download media from there it if you need

1. Fix scrolling on all devices and smoothen properly.ive had reports that some devices experience glitching
2. The contact me section should send an email to me at andres.cervera.rozo@gmail.com, but none of these messages are reaching me. Also tell me if there's any way to see the ones people have already sent
3. Sometimes when a page is loading, the page allocates a different amount of space for an image, and then it looks like everything jumps a little once the image actually loads
4. When i load skills & tools on desktop, for half a second everything looks very narrow, and then it loads and expands out into the proper sizing
5. My name Andres is spelled with an acute accent on the e. Implement this sitewide wherever my name appears
6. In Education, the Engineers australia photo should be part of the carousel, not the photo with the U of T building
7. FLAG A TASK FOR ME, when the bachelors card is clicked, it should expand to image https://drive.google.com/file/d/1DFLgtRs3jnOC92-HOKm0LyPgfPfK_-2i/view?usp=drive_link in the carousel
8. FLAG A TASK FOR ME, when the Masters card is clicked, it should expand to image https://drive.google.com/file/d/1mqSl2741Py5k9LscTa_MMMDbXq-409Sq/view?usp=sharing in the carousel
   FLAG A TASK FOR ME, replace graduation photo with the one of me in my suit from here https://drive.google.com/file/d/1v0b6wsOySYzSVrYXEtoRXlpJAjygnRMF/view?usp=sharing
9. Fix blurring in photos
10. Is there anything that can be done to load images faster so i dont see those gray boxes
11. On the homepage, the Mechanical box doesnt highlight in the same way that the others do. Fix that
12. When you click on a tag, the "← Back to Skills & Education" button should be in white font
13. Set the year at the bottom of each page to be dynamic and change based on the current year
14. If possible, on a phone, pressing back when a carousel is open should just close the carousel itself, not change pages

Project Cover Image

1. For Georeferenced Ground Targets Using UAV Imagery, set the project cover image to be the one with the bounding box on the target colour

2. FLAG Dynamic Modeling and Control of a UAV in Simulink for updating cover photo
3. For Sim to Real Drone Racing with RRT* Planning, use the “The planned path in PyBullet, weaving through the gates in the order revealed at runtime.” photo as the cover
4. For “EKF-Based Probabilistic Localization Using Sensor Fusion” project, set the image with all the math as the cover
5. For “Adaptive Heuristic Exploration for Autonomous Mapping on Turtlebot”, use “The simulated environment used before hardware runs.” photo as the cover, but zoom in 10% and crop the image
6. For “Sampling-Based Motion Planning: Speed vs. Optimality”, use the regular RRT Planner photo as the cover
7. For “Human Activity Classification Using Azure AutoML”, use the “The Azure Machine Learning workflow, from data preparation through to deployment.” photo for the cover
8. For “Geolocating Fuel Stations Using Vehicle Telematics and BigQuery”, use the “Detected clusters checked against satellite imagery - the final filter against false positives like depots.” photo as the cover
9. For “Multi-Class Animal Classification with CNNs”, use the network architecture photo as the cover
10. For “Real-Time Trail Segmentation Model for An Autonomous Robot”, use a high quality screen grab from the 9 second mark of the project video as the cover for the project
11. For Transformer-Based English-to-French Translation, use the “English to French, the translation task the model was trained on.” photo for the cover
12. For “Microcontroller-Driven Beverage Automation Platform”, use the “The pumps and tubing feeding from each bottle.” photo for the cover
13. For “Oscilloscope Analog Interface and PCB Design”, use the top layer half of the PCB photo as the cover
14. For “CAD Reconstruction of Apple MacBook Pro”, use the “Front-on view, checking the display and chassis proportions against the real 15-inch MacBook Pro.” photo for the cover
15. For the “Dynamic Force Analysis and Redesign of an Outdoor Rowing Machine” project, use just the 3D render portion of the “The original linkage against the redesign, with the handle path each produces.” photo for cover
16. For “SolidWorks Design of a Home CNC Mill”, use the “The complete mill, sized and priced for personal-scale use rather than an industrial shop.” photo for the cover
17. For “Stress and Finite Element Analysis (FEA) of an Aircraft Stringer”, use just the bottom left square of the “Mesh, stress and deformation results, with the convergence study behind the element count.” photo for the cover
18. Ensure that when a project appears from the Search bar, or from clicking on a tag in the Skills and tools section, the cover image that appears matches those from the projects pages
19. Modify the feature projects cover photos as well to match these
20. Apply a similar crop to the left cover photo of the Mechanical card on the homepage, to just get the bottom left square

About Me

- Should be able to click on and swipe through carousels in their respective sections
- Only leave a caption on the photos from the top section, not a subcaption
- For the Europe photo, update places to be “Rome, London, Paris, Norway, Stonehenge, Edinburgh, Lisbon, Silverstone, Iceland, and Greenland”
- Remove the subcaption from the Australia photo
- For Southeast Asia, also include Change Mai and Nusa Penida
- For Colombia, remove the “where i was born” part and include Medellin, Santa Marta, remove Carribean Coast, add Amazon Rainforest, Salento
- For Sport & Training, add barnyard weight training
- Replace the “Skydiving” Caption with “GoPro Adventures” and make the subcaption “Skydiving in Dubai, bungee jumping in Colombia, scuba diving in Indonesia, rafting in Norway, quadding in Bali & Dubai, canyoneering in the Philippines, whale watching in Iceland, and paragliding in Colombia.”
- For the Gym, set subcaption to “New best of 140kg for 5 reps.”
- Remove subcaption from Salsa

Skills & Education

1. Bring Spanish tag to the end of those in Languages & Programming, but leave Google Apps Script to be on the 2nd line as-is
2. Specifically for the tags, not their corresponding titles on the left, i want the tags to be centered in their corresponding areas, not left aligned
3. For each section, set so that the tags are ordered in descending by the amount of projects they have associated with them
4. The U of T building photo should be it’s own carousel with 1 image, not a part of the other images

Homepage

1. Update the Embedded Systems & Prototyping Card to crop out the blur on the sides of the photo, but only apply that crop on here
2. Use the “Nationwide coverage aggregated from over 2 million vehicles, filterable by carrier and network technology.” photo to be the cover photo for the project “Geospatial Signal Strength Analysis Using BigQuery” And apply it as well on the feature Projects”, and the Data Science card
3. Use the “The LEDNet encoder-decoder architecture.” as the Machine Learning card cover photo
4. Use just the top half of the PCB photo for the cover of the Hardware and Power Systems card
5. Remove the +61 in my phone number and just make it 0422 216 082, and make it clickable as a phone number
6. Make the email address also clickable as an email

7. Change “Currently based in” to “Based in”
8. Make the face and title of About Me section also redirect to the About Me page
9. Split the top About me paragraph into 2, where the new one starts with “I earned my…” and make those be centred on mobile

New Project Finnbot

1. Create all the workings for a new Project to add to my portfolio. The project will be based on what i am working on in another Claude Code session. Read all about it in the github https://github.com/andresc44/ai_financial_advisor to understand how it works, and come up with a title card description, and then the 2 paragraph content description of the project and what tools it used. Use the tags python, HTML, and Claude Code, which will need to be added as a tag and put under Languages and programming, and with an icon image pulled from the web. For the images for the project, just make a carousel of 5 images as place holders of an image of Anthropic logo. Then remove the Battery characterization project from being one of the featured projects, and instead put this project to be featured there as the 5th project. Review carefully for consistency with other projects, and integrate into corresponding pages as a project under Programming / Machine Learning

UAV Simulink project

- Look at Project currently labelled “Dynamic Modeling and Control of a UAV in Simulink”. Now read https://github.com/andresc44/Flight-Simulation-Project and https://drive.google.com/file/d/178igO6-odTn60Vx2QwSVJM_hFj09iYO2/view to understand what the project itself is about.
- The project itself was for 4 people split into groups of 2 and then put together in the end. I accidentally wrote this projectmisremembering which half i did, but i know now that i was responsible for the fixed wing portion of the project. Rewrite this section with this in mind while keeping the same tags.
- Also looking at this doc at specifically the parts to do with AER1216 may help you understand my contributions https://drive.google.com/file/d/1EVn-AF9I-xgeWHhxtM1CJGYJkyrQspFM/view?usp=sharing
- Remove the images and video that blatantly are just for Multirotor stuff, and replace them with the ones in this link https://drive.google.com/drive/folders/1qbNYC7arLoU_QSg2tp9PAzhKF2GUAA_C that are clearly for the fixed wing project. If this is too difficult for you, it’s alright ill do it myself after
- Leave flagged for me toi review media and add the fixed wing video myself to youtube if its too heavy for the site as-is
